NAME : MONISHA AGE : 38 Years SEX : Female
LAB REF NO.: 23706452 ACCESSION NO : 0001HG017277
COLLECTED ON : 08/07/2019 00:00 REGISTERED ON : 08/07/2019 15:04 REPORTED ON : 09/07/2019 20:31
Report Status: Final REFERRED BY : SELF

Tests	Results	Units
-------	---------	-------

* CA72.4, SERUM

CA72.4, SERUM

Investigation	Observed Value	Unit	Biological Reference Interval
CA-72.4 (Serum,ECLIA)	7.61	U/ml	<= 6.9

1. CA 72-4 enzyme immunoassay involves quantitative measurement of CA 72-4 (Tumor-associated glycoprotein 72 or TAG-72) in serum and plasma
2. It is elevated in carcinoma of pancreas, stomach, gall bladder, colon, ovaries, cervix and endometrium.
3. The highest diagnostic sensitivities are found for gastrointestinal and ovarian carcinomas.
4. CA 72-4 correlates well with size and tumor stage. Hence it is the marker of choice for therapeutic monitoring and follow up care of gastrointestinal cancer in addition to CA 19-9 or CEA.
5. It is independent marker for the therapeutic monitoring and follow up care of ovarian patients in particular CA125 negative patients
6. Benign diseases such as rheumatic diseases or ovary cysts may also result in elevation.

NOTE:
Patients on Biotin supplement may have interference in some immunoassays. With individuals taking high dose Biotin (more than 5 mg per day) supplements, at least 8-hour wait time before blood draw is recommended.
Ref: Arch Pathol Lab Med—Vol 141, November 2017

Interpretation(s)
*THIS TEST IS NOT COVERED UNDER NABL SCOPE.
*TEST PERFORMED AT DIAGNO LABS AFFILIATE LAB.

Tumor marker before therapy
